

## Sharks

3A

LEE CHUN HEI SILAS

Sharks are fish. They live in warm water, large aquariums and near beaches. They have streamlined bodies, which allow them to swim easily in the water. They can sleep and swim at the same time.

All sharks are big. The biggest shark is the whale shark. It can grow up to 18 metres long and weighs over 12 500 kilograms.

Sharks live in the deep water, such as the Atlantic Ocean.
