

Ocean

4B Ye Hok Wun

As we know, oceans make up 70% of Earth's total area. Oceans are very large water bodies having so much amount of water.

Oceans are a continuously flowing large saline water bodies containing a large ecosystem within.

There are five oceans in the world namely Indian Ocean, Pacific Ocean, Arctic Ocean and Antarctic Ocean of which Pacific Ocean is the largest one.

This ocean can be peaceful but sometimes this ocean can also be dramatic. Oceans are also very powerful weapons created by God to wipe out whole raise of organisms living on Earth and this can be done by some changes that occurs in oceans.

These changes mainly occur due to tornadoes that turn it into cyclones and many tides.

Tsunamis are the most powerful events that can occur due to oceans. Tsunamis are very dangerous that it can destroy many things which are standing in front of the great waves.

Oceans are really beautiful but also mysterious.
